

AWARDED BY OUR PROFESSION

Bacharach Institute for Rehabilitation is a Level I Licensed Acute Rehabilitation Facility, fully accredited by the Joint Commission. Bacharach is one of only three hospitals in the region to have earned the prestigious Inpatient Stroke Specialty Program Accreditation from the Commission on Accreditation of Rehabilitation Facilities (CARF). Please visit our website to learn more.

**THE STROKE CENTER
AT BACHARACH**
61 West Jimmie Leeds Road
Pomona, NJ 08240

The Stroke Center. It's one more reason we are recommended by our peers. Honored by our profession. Applauded by our patients.

DIRECTIONS

Take Garden State Parkway to Atlantic City Rest Area (mile post 41). Enter rest area, follow signs for Jimmie Leeds Road (you will see blue hospital signs). Turn left at traffic light onto Jimmie Leeds Road. Turn right at next traffic light. Follow signs for Bacharach and park in visitor's lot.

A TEAM APPROACH TO CARE

At Bacharach, we literally surround stroke survivors with a comprehensive team, including a psychiatrist, rehab nurse, physical therapist, occupational therapist, speech therapist, recreational therapist, dietitian, psychologist and case manager. This team approach allows us to create an individualized plan of care, based on your unique condition.

PHYSIATRY

Each patient has a doctor of physical medicine, called a physiatrist, who will direct the therapy team's plan of care.

OCCUPATIONAL THERAPY

The occupational therapist enables stroke patients to safely resume the activities of daily living, such as eating, dressing and personal grooming. OT patients will work to restore upper body strength and fine motor skills as well as cognition. Patients also undergo a vision evaluation to determine the need for neuro-optometry.

PHYSICAL THERAPY

Stroke may cause limitations in strength, balance and endurance. The physical therapist works with each stroke survivor to regain skills necessary to walk, transfer in and out of a car and even negotiate stairs.

Bacharach outperforms both regional and national averages in many key measures.

The Functional Improvement Measurement (FIM)[™] scale measures how much more function a patient has at discharge as opposed to admission.

The Functional Improvement Motor Score refers to some specific motor skills including locomotion and transfers.

Case Mix Index indicates the level of severity of illness at the time of admission; a higher number indicates a more involved patient.

FIM is a trademark of Uniform Data System for Medical Rehabilitation, a division of UB Foundation Activities, Inc.

SPEECH-LANGUAGE THERAPY

Stroke commonly leads to communication disorders, whether expressive or receptive. The speech-language pathologist will work to improve communication, cognition and swallowing disorders. Dysphagia therapy, including VitalStim[®], is provided to maximize swallowing safety.

PSYCHOLOGY

Psychological consultation is extremely important for the stroke patient and very commonly referred to patients facing sudden changes in ability and independence caused by stroke.

CASE MANAGEMENT

Bacharach's case management team works to make sure every patient gets the right aftercare upon discharge. With access to a wealth of resources, the case manager works with the therapy team, patient and family to coordinate every aspect of the discharge plan.

NUTRITIONAL COUNSELING

Working closely with the speech and occupational therapy team, Bacharach's clinical dietitians will address swallowing problems with modified diets and carefully monitored meals, if necessary.

THERAPEUTIC RECREATION

Skilled recreational therapists help patients regain confidence and social skills through hobbies and leisure activities.

POOL THERAPY

We offer a therapeutic pool for aquatic physical therapy. The heated pool increases circulation and promotes flexibility and range of motion and is especially beneficial for gait and balance improvement after stroke.

STAYING ON THE FOREFRONT OF CARE

We're constantly adding the newest stroke treatment advances, including:

- **Bioness[®]** - a new treatment to help strengthen upper and lower extremities for greater mobility.
- **VitalStim[®]** - to help with dysphagia and swallowing disorders.
- **Unweighting system** - for patients who don't have the leg or trunk strength to support their body weight during exercises.
- **Saebo-Flex** - to increase flexibility and movement in the upper extremity.
- **Pet therapy** - using animals to help with physical, emotional and cognitive functioning.
- **Dyno-vox device** - to help augment communication.
- **Spasticity management** - baclofen pump management and botulinum toxin injections.

OUTPATIENT STROKE REHAB

Bacharach has physical and occupational therapy centers in four counties, Atlantic, Cape May, Ocean and Cumberland, to provide convenient outpatient services for most patients. There is also a day rehabilitation program offered at the main campus in Pomona for those who may need additional services such as speech or psychology.

Outpatient services may include:

- Family training and patient education
- Cognitive training
- Support group - guest lecturers and community participation
- Driver re-education
- Neuro-optometry clinic
- Day rehab
- Spasticity clinic
- VitalStim[®] swallowing therapy
